

I claim:

1. A holder comprising:
a pocket for holding informational material; and
an extension extending from said pocket, said extension adapted for
engagement by a window pane when the window pane is in an at least a generally closed
position.
2. The holder according to Claim 1, wherein said pocket is formed by at least one
sheet of plastic.
3. The holder according to Claim 2, wherein said sheet of plastic comprises clear
plastic.
4. The holder according to Claim 2, wherein said sheet of plastic forms said
extension.
5. The holder according to Claim 1, wherein said extension includes a looped
portion, said looped portion for holding a cylindrical member wherein said cylindrical
member adapts said extension for being engaged by a window pane when the window pane is
in the at least generally closed position.
6. The holder according to Claim 1, wherein said pocket comprises a first pocket,
further comprising a second pocket.
7. The holder according to Claim 6, wherein said second pocket is intermediate
said first pocket and said extension.
8. The holder according to Claim 6, wherein said extension includes said second
pocket.
9. The holder according to Claim 1, said pocket having an opening for inserting
therein and retrieving therefrom the informational material from said pocket.

10. The holder according to Claim 9, further comprising a cover for at least partially closing said opening.

11. The holder according to Claim 10, wherein said cover includes a fastener member and said pocket includes a corresponding fastener member cooperating with said fastener member of said cover to close said opening.

12. The holder according to Claim 10, wherein said fastener members comprise hook and loop members.

13. The holder according to Claim 9, wherein said pocket includes an upper edge when said holder is mounted in a window, said extension extending from said upper edge.

14. The holder according to Claim 13, wherein said opening is located at or near said upper edge of said pocket.

15. The holder according to Claim 13, wherein said pocket includes a side edge and a bottom edge, said opening being located at or near one of said side edge and said bottom edge.

16. A holder comprising:
a first sheet of flexible material;
a second sheet of material secured to said first sheet and forming a pocket with said first sheet, said first sheet having an extension extending beyond said second sheet, said extension having a length sufficient for draping over an upper edge of a window pane;
a loop formed in said extension; and
a cylindrical member positioned in said loop and forming a stop to thereby support said holder from the window pane when said extension and said loop are draped over an upper edge of a window pane and the window pane is at least partially closed.

17. The holder according to Claim 16, wherein said flexible material comprises plastic.

18. The holder according to Claim 16, wherein said second sheet comprises a flexible material.

19. The holder according to Claim 18, wherein said flexible material of said second sheet comprises a substantially clear flexible material.

20. The holder according to Claim 16, wherein said pocket includes an open side to permit material to be inserted into or retrieved from said pocket.
